## Publications

### Modulermaker

NPM

NPM PACKAGE

2023

- Modulermaker is a versatile toolkit designed to simplify the process of generating robust and structured modules for MongoDB database schema management using Mongoose and TypeScript. Seamlessly create model interfaces, schemas, controllers, services, and routes with predefined templates, empowering developers to expedite the setup of scalable data models within their Node .

- RnFetchApi is a simple utility for making API calls using the fetch function in React Native. It provides easy-to-use shorthand methods for common HTTP methods such as GET, POST, PUT, and DELETE, and allows you to configure a base URL for your API requests.
